**Subject:** Bio-One

Jamie from EDS Pumps introduced this product to our plant approximately six weeks ago. We were experiencing high H<sub>2</sub>S readings in our sewer lift station when Omega Environmental Service cleans this station. We started using the product in hopes that it would reduce or eliminate the high readings that Omega was encountering on their monthly service. Bio-One was used on non-production days, pouring 2-4 oz. in all of the drains, starting with the farthest from the lift station. Also 4 litres was poured into the lift station and 4 litres in the holding/sediment tank. Omega reported that the high H<sub>2</sub>S readings were nonexistent or very low during the next cleaning. It was observed the lift station fluid surface was clean and clear as was the holding/sediment tank. We have created a weekly schedule to use Bio-One as its use has been positive. This product is found to be effective in breaking down fats that accumulate in the lines reducing the occurrence of plugged drain lines.

Sincerely  
Cam Imlach
